Foreword

RAM - Reserve Autonomous Module (Reserve Stand-Alone Module), which allows you continue the check-in of passengers and baggage in case of outage or lack of Internet. The RAM module works in conjunction with the third-party host DCS (the DCS which is located at your airport), assisting with any problems, be it interrupting communications or problems on the servers of the third-party host DCS. RAM be able to replace the third – party host DCS at any stage of check-in process.

The RAM, endowed with the following basic functions can be also used as a full-fledged Departure Control System for passenger and baggage check-in:

- processing PNL / ADL (Passenger List, Flight creation);
- passengers and baggage check-in;
- boarding;
- returning final e-ticket coupon status;
- printing flight documentation;
- Passenger Manifest
- Baggage Manifest
- finalizing the flight and sending all the necessary post departure messages to the airlines and destination airports via e-mail or teletype channels.

Running RAM

RAM - is an integrated module in the common access of **UDPS**.

UDPS - Universal Departure Platform

UDPS - is an analogue of the CUTE (Common Use Terminal Equipment), which allows to have a Multi-DCS work environment and easily switch between DCS using one set of equipment.

Advantages and requirements

Advantages:

- Easy-to-use intuitive graphical interface;
- Easy switching between DCS;
- Activate/deactivate DCS;
- Prevent conflicts between services and applications of different DCS;
- Minimum time investment on training and implementation of the solution;
- Full localization.

Requirements:

- Workstation based on Windows XP/Vista/7/8/10;
- The application requires administrative access to OS;
- Firmware AEA required for peripheral equipment (ATB, BTB, BGR).

Running RAM from UDPS

RAM is running by click at the UDPS “Menu” panel.

Agent's log on form in the RAM

User	Agent's login
Password	Agent's password
Host	Server IP Address (for system administrator)
Database	Database Name (for system administrator)
Port	Database connection port (for system administrator)
Save password	Saving password (at the discretion of the agent)

Connect to RAM

RAM
RESERVE AUTONOMOUS MODULE

User: Agent

The screenshot displays the Flight Manager application interface. At the top, a navigation bar includes links for Flights, Settings, Devices settings, Reports, Window, and About. Below this is a toolbar with icons for Exit, Flights, Reload, Check-In, Boarding, Messages, List, Tr. List, Comments, Pax, Bag, Tr. Manifest, NNOS, INF/CHLD, Zones, ETKT, History, and Others. The main area is divided into two sections: Flight parameters and Date range. The Flight parameters section shows a table of available flights with columns for Carrier IATA code, Flight No, Carrier name, Flight date, Departure time, and Aircraft Reg. No. The Date range section shows a date range from 04/05/2019 to 04/05/2019. The Assign aircraft dialog box is open, showing a list of aircraft and a table of aircraft assignments. The aircraft list includes columns for Carrier IATA code, Flight No, Carrier name, Flight date, Departure time, and Aircraft Reg. No. The aircraft assignment table shows columns for Zone (A, B, C, D, E, F) and a list of aircraft. The dialog box also includes a list of aircraft types and a list of aircraft models. The Assign aircraft dialog box is titled "Assign aircraft" and contains a list of aircraft and a table of aircraft assignments. The aircraft list includes columns for Carrier IATA code, Flight No, Carrier name, Flight date, Departure time, and Aircraft Reg. No. The aircraft assignment table shows columns for Zone (A, B, C, D, E, F) and a list of aircraft. The dialog box also includes a list of aircraft types and a list of aircraft models. The Assign aircraft dialog box is titled "Assign aircraft" and contains a list of aircraft and a table of aircraft assignments. The aircraft list includes columns for Carrier IATA code, Flight No, Carrier name, Flight date, Departure time, and Aircraft Reg. No. The aircraft assignment table shows columns for Zone (A, B, C, D, E, F) and a list of aircraft. The dialog box also includes a list of aircraft types and a list of aircraft models.

Appoint the aircraft

In the pop-up window of “**Assign aircraft**” select the aircraft.

- Select the aircraft from the operating carrier database in the field **3** (listed above - item 3.4.). The system automatically inserts: type of aircraft - field **4**, brand and model of aircraft - field **6,7**.
- Select the Seat map configuration from the operating carrier database – field **5**.

*When all the commands have been executed, it is necessary to make additionally check whether the registration number of the aircraft and the configuration of the aircraft seats has been chosen correctly, then execute – **Save**.*

4. The assigning aircraft for the flight should be performed once by a senior check-in agent or supervisor. All above actions in paragraphs 2-3 are restricted for check-in agent role.

In case of the aircraft is not available in the operating carrier database, the system gives an opportunity to choose the aircraft from another airline aircrafts' database.

In the pop-up window of “**Assign aircraft**” select the aircraft.

Pop-up window consists of the fields to be filled:

1. **Reg. No Manual Input**– Optionally enter manually the new aircraft number (in case of absence in the aircraft's database)
2. **Use From Airline** - assign the aircraft from another airline database (enter IATA code of selected airline database)
3. **Registration Number** - select the desired aircraft by registration number
4. **Aircraft Type** - selection of aircraft type (according to the classification in the aircraft database)
5. **Seat map Configuration** - selection of aircraft cabin configuration
6. **Manufacturer** – selection of aircraft's brand
7. **Model** – selection aircraft model

Assign - confirm all taken actions.

Final interface after all taken actions

CHECK-IN

1. **Log on to Check-In module** – Select the necessary flight in the **Flights** list with the **FO** status to enter the Check-In mode

The screenshot shows the 'Flights list' window with the following flight data table:

	Carrier IATA code	Flight №	Carrier name	Flight date	Departure time	Aircraft	Flight status	Code	Airport name	City	Code	Airport name	City
76	JL	2872	Meraj	Fri October 23, 2015				TBZ	Tabriz	Tabriz	MHD	Mashhad	Mashhad
77	S7	958	S7 Airlines	Fri October 23, 2015				TJU	Kulob	Kulob	DME	Domodedovo	Moscow
78	S7	960	S7 Airlines	Fri October 23, 2015	00:00	EPTBB	FO	LBD	Khudzhand	Khudzhand	DME	Domodedovo	Moscow
79	TK	259	Turkish Airlines	Fri October 23, 2015				LBD	Khudzhand	Khudzhand	IST	Ataturk	Istanbul
80	TK	0259	Turkish Airlines	Fri October 23, 2015				LBD	Khudzhand	Khudzhand	IST	Ataturk	Istanbul
81	U6	2996	Ural Airlines	Fri October 23, 2015				TJU	Kulob	Kulob	DME	Domodedovo	Moscow
82	U6	2970	Ural Airlines	Fri October 23, 2015				TJU	Kulob	Kulob	DME	Domodedovo	Moscow
83	U6	2956	Ural Airlines	Fri October 23, 2015				LBD	Khudzhand	Khudzhand	SVX	Koltsovo	Yekaterinburg
84	TJ	645	Tajik Air	Thu October 22, 2015	18:00	EY-444	FO	LBD	Khudzhand	Khudzhand	DME	Domodedovo	Moscow

A callout box points to the 'FO' status in the 'Flight status' column for flight 78.

1.1. Click on the “Check-In” button

The screenshot shows the same 'Flights list' window as above, but with a red arrow pointing to the 'Check-In' button in the top toolbar. The flight data table remains the same.

2. The tab with a list of passengers who are ready for check-in will appear.

The screenshot shows the S7 Airlines check-in interface. At the top, there's a flight summary for S7 960 Sun Jun 09, 2019 - CHECK-IN 008C/150Y AIRBUS 320-214. Below this, a table lists passengers with columns for Name, Detail, Group, Dest, Cabin, Class, Seq, Bags, PNR, Seat, and Status. The table is filtered to show passengers ready for check-in. On the right, there's a summary of flight information, including a breakdown of passengers by class (Business, Economy) and a baggage summary.

5.565. Block seats

- 6.1. Enter the quantity of pieces of baggage - **PCS**, weight of the baggage - **Kg**, weight of hand luggage - **Kg** (if necessary)
- 6.2. Choose the seat in the aircraft - the system offers a seat automatically, but if there are free seats available, it is possible to change the proposed seat manually by clicking on the selected seat.
- 6.3. Confirm **Check-in** - complete check-in
- 6.4. **Yes** - to

confirm actions

The screenshot shows the 'Check-In data' window with tabs for Summary, Baggage Tags, APIS, APIS PNL/ADL, and ONWARDS. The 'Summary' tab is active. Fields include Ticket Class (Y), Checkin Class (Y), Seat (12A), and Baggage (1 pcs/ 20 kg/ 5 kg). A 'Confirm Checkin' dialog box is open, asking 'Save Check-In data and close this dialog?' with 'Yes' and 'No' buttons. Red arrows indicate the sequence of actions: 6.1 points to the baggage weight field, 6.2 points to the seat field, 6.3 points to the 'Confirm Check-In' button, and 6.4 points to the 'Yes' button in the dialog.

6.5. The system prints a boarding pass and a bag tag. Check-in is completed. The status of the passenger in the passenger list changes to "**Checked-in**".

Quick passenger search in the list

For the quick passenger's search type his first or last name in the passenger list:

The screenshot displays the S7 Airlines flight management system interface. At the top, the flight information is shown: **Flight: S7 960 Thu Nov 26, 2015 - CHECK-IN 008C/150Y AIRBUS 320-214**. The routing is **LBD - DME**, the gate is **?**, and the status is **STD: 00:00 Status: FO - Flight Open**. The **00:00:00** timer is also visible.

The main section shows a list of passengers with columns for Name, Detail, Group, Dest, Class, Seq, Bags, PNR, Seat, and Status. The passenger **BOLTABOEV ORIFZHON** is highlighted in blue.

On the right side, there is a **Quick search** window. It contains a text input field with the text **BOL**. Below the input field, there are two sections: **C: Business** and **Y: Economy**. Each section displays a grid of seats (A, B, C, D, E, F) and their corresponding status (e.g., 1, 2, 3, 4, 5, 6, 7, 8, 9, 10, 11, 12, 13, 14, 15). The **Quick search** window also includes a **Select view** dropdown (set to **Show types**) and a **Select algo** dropdown (set to **Balance**).

At the bottom of the interface, there are buttons for **LSR**, **ATB**, and **BTP**. The system time is displayed as **TIME NOW IS UTC: 10:34 Local: 15:34**.

In the QUICKSEARCH window, the system displays the typed letters, all matches are highlighted in blue, the agent should choose the required passenger.

Group check-in

The group consists of passengers having a common group code, displayed in the corresponding column.

1. Select one of the passengers from the group by right-click, then open the context menu and select **Check-In whole group**

The screenshot shows the flight check-in software interface. At the top, it displays flight information: Flight: 7J 4929 Tue Oct 27, 2015 - CHECK-IN 136Y BOEING 737-300. Below this, there's a routing: LBD - OVB and gate: ?. The status is F0 - Flight Open. The main area shows a list of passengers with columns for Name, Detail, Group, Dest, Class, Seq, Bags, PNR, Seat, and Status. A context menu is open over the passenger list, with the option "Check-In whole group" highlighted. To the right, there's a seat map showing the aircraft layout with seats numbered 1 to 23.

1. All passengers from the group will appear in the **Name** list:

1.1. The system will assign the seats automatically- column **Seat**

1.2. Assign the head of group (the system automatically chooses the first from the list) **Group leader**

1.3. Enter the quantity of pieces and weight of baggage in the **Baggage (pieces / weight / handbag)**

1.4. Check-in a group by clicking "**Confirm Check-In**" or double-click "**ENTER**"

The screenshot shows the "Check In. 4 pax(es) to check in" dialog box. It has a "Common" tab with a list of passengers. The first passenger, POPOV RUSTAM, is selected. Annotations with red numbers point to specific fields: 2.1 points to the "Group leader" checkbox, 2.2 points to the "INFT" column, 2.3 points to the "Baggage (pieces/weight/handbag)" field, and 2.4 points to the "Confirm Check-In" button. The dialog also includes fields for "Name", "TKNE", "Check-In data", "Summary", "Ticket Class", "Checkin Class", "Seat", "Baggage", "Reprint Boarding Pass", "Comments", and "Gate comment".

The system prints all boarding passes and bag tags. The group is displayed as **PLD-13C** in the passenger list, while **13C** is the head of the group, and the entire group's baggage will be assigned **3/60/15** to him.

2. The system integrates selected passengers into a group

2.1. Enter the quantity of seats and weight of baggage

2.2. Print boarding passes and bag tags of the entire group

Seat Map's colors' value

Select view

“Select view” gives an opportunity to display “Seat Map” in different ways - the standard seats “Show seats” or gender icons “Show types” for Checked-in passengers.

Advance seat assign

The system is able to book seats in advance:

The screenshot displays the flight management system interface for flight 7J 645 on Saturday, October 24, 2015. The flight is a Boeing 737-300 operating on the LBD - DME route. The status is 'Flight Open' with a standard time of 00:00. The interface includes a menu bar with options like Flights, Window, Settings, and About. A toolbar contains icons for Exit, Flights, Reload, Check-In, Boarding, List, Tr. List, Comments, Pax, Bag, Tr. Manifest, NNOS, INFT/CHLD, and History. The main area shows flight details and a list of passengers. A green box highlights the 'Information' section, which provides summary statistics for the flight. To the right, a seat map for the Economy class is visible, showing the layout of the aircraft with seats 1-13 in each row. Red arrows point from the passenger list to the corresponding seats in the map, indicating the seat assignment process.

To assign a seat in advance:

- Select a passenger
- Click on the preferable seat on the Seat Map

The selected seat is highlighted in red. The attribute "seat number" appears in the passenger list marked in gray. This function is analogue of the Soft Block Seat function.

Changing seats

Changing the seat of the passenger or whole group is carried in a similar way:

1. Select the passenger - right-click to open the context menu and select **Edit Check-In**

The screenshot displays the flight management system interface for flight SZ 2256 on Monday, September 28, 2015. The flight is a Boeing B737-300 operating on the JED - DYU route. The status is 'Flight Open' with a standard time of 16:30. The interface includes a menu bar with options like Flights, Window, Devices settings, and About. A toolbar contains icons for Exit, Flights, Reload, Check-In, Boarding, Tr. List, List, Tr. Manifest, Pax, Bag, NNOS, INFT/CHLD, History, and Com-Is. The main area shows flight details and a list of passengers. A green box highlights the 'Information' section, which provides summary statistics for the flight. To the right, a seat map for the Economy class is visible, showing the layout of the aircraft with seats 1-23 in each row. A red arrow points to the 'Edit Check-In' option in the context menu, which is open over the passenger list. The context menu includes options like Check-In whole group, Add group to selection, Unselect all, Seat Swap, Auto reserve seat(s), Add No-fee Passenger, Add Infant, Block passenger, Stand-by passenger, Offload passenger, Block seats, Reprint boarding pass and bag tag(s), Reprint boarding pass, Reprint bag tag(s), Comment, Gate comment, Show Seatmap, and Show seat number on mouse over.

4. Reprint boarding pass “Confirm Edit”

The screenshot shows the flight management system interface for flight SZ 2256 on Monday, September 28, 2015. The flight is a Boeing B737-300, and the status is 'Flight Open'. A modal window titled 'Check In 7 parties to check in' is open, displaying passenger details and a 'Confirm Edit' button highlighted with a red arrow. The background shows a list of passengers and a seat map.

Changed seats are shown in the passenger list.

Comments

“Comments” – is special field to enter additional information in free format. The comment is opened by right-click in the context menu or using hotkey Ctrl + C / Ctrl + G

The screenshot shows the flight management system interface for flight 7J 4929 on Tuesday, October 27, 2015. The flight is a Boeing 737-300, and the status is 'Flight Open'. A context menu is open over a passenger, showing options like 'Comment' (Ctrl+C) and 'Gate comment' (Ctrl+G). The background shows a list of passengers and a seat map.

There are two types of Comments which refer to a specific passenger:

1. **“Check-In Comment”** - is entered during the check-in and is intended for giving notifications for the agent. This comment can be used for the following situations:

Comments dialog:
Comment: No passport

Seat map (Y Economy):
1-23 rows, A-F columns. Passengers are seated in rows 1-12 and 18-23.

2. **Gate Comment** - is entered during the check-in and is intended for giving notifications for the agent at the boarding. This comment can be used for the following situations:

- notices about changing of boarding pass
- about forgotten things at the Check-in desk
- need to stop the passenger by the relevant structures of the airport, etc.

ONWARDS - check-in baggage to final destination

For transfer passengers there is an opportunity of baggage check- in to the final destination.

- This function can be applied if the check -in agent is sure that the second and subsequent legs of the route do not violate the acceptable baggage allowance.
- In order to check-in baggage to the final destination the agent has to make sure that the passenger has the right to enter the country (final destination). Some states may require a transit visa for transfer passengers. The agent has to make sure that all transit points do not require a transit visa or check for its presence before the baggage check-in starts.
- Please note that this function does not check-in the passenger himself for the second and next flights. The agent must inform the passenger that upon arrival at the transit point he has to see the Transfer Desk to receive the second and next boarding passes, presenting baggage tags issued earlier for entering data into the second and subsequent DCS.

2.1 “Onwards” baggage can be reflected automatically in case if this information is present in PNL in IATA format on the second and next flights, the information is displayed in the Check-In pop-up window, **ONWARDS** tab

- *FlightNo - The number of second and subsequent flights
- *DST- IATA airport code of the second and subsequent flights
- *Class- Service class

- ***Date-** Departure date for the next flight
- **Time-** The departure time for the next flight

Flight: S7 960 Mon Dec 14, 2015 - CHECK-IN 008C/150Y AIRBUS 320-214
Routing: LBD - DME Gate: ? STD: 00:00 Status: FO - Flight Open

2.1

2.2. If information about transit flights is not in the PNL, the system has the ability to enter data manually, but the service has to be agreed with the representative of the airline of the first carrier.

2.3. In case if there is a need to add transit baggage in pop-up window “Check-in”, “ONWORDS” tab press “Insert” and the additional field for entering new data will be open.

Flight: S7 960 Mon Dec 14, 2015 - CHECK-IN 008C/150Y AIRBUS 320-214
Routing: LBD - DME Gate: ? STD: 00:00 Status: FO - Flight Open

2.3

2.3.1. Next, enter the required flight number, airport code, passenger service class, and the date and time of departure, press **Enter**.

2.3.2

The system identifies passengers with transit baggage with an icon “suitcase” in the **Dest** column.

* The maximum possible number of onward legs - 3 (THREE).

2.4. If the transit direction of baggage needs to be removed - in the **Check-In** pop-up window, the **ONWARDS** tab, select the necessary transit baggage direction.

2.4.1. Press the **Delete** key on the keyboard.

2.4.2. Then confirm the action –**Confirm Edit**, the selected luggage is removed.

Edit checked-in baggage

1. Select the checked - in passenger (whose bags information needs to be changed) on the screen, right-click to open the context menu- **Edit Check-in**.

1.1. Go to the **Baggage Tags** tab, which displays data on the passenger's checked-in baggage.

The screenshot shows the 'Check-in' screen for flight 7J 4929 on Tuesday, October 20, 2015. The flight is a Boeing 757-200, and the status is 'Flight Open'. The passenger list is displayed, and the 'Baggage Tags' tab is selected. A red arrow labeled '1.1' points to the 'Baggage (kg)' field, which is currently set to 1.20. The interface includes a top menu bar, a flight information section, a passenger list, and a baggage tag summary.

1.2. If there is a need to add a piece press the **Insert** key, an additional field appears for entering new data.

1.3. Next, enter the required weight of baggage and press **Enter**.

1.4. Click on **Confirm Edit** and the system automatically prints the additional bag tag.

The screenshot shows the 'Check-in' screen for flight 7J 4929 on Tuesday, October 20, 2015. The flight is a Boeing 757-200, and the status is 'Flight Open'. The passenger list is displayed, and the 'Baggage Tags' tab is selected. A red arrow labeled '1.2' points to the 'Insert' button. A red arrow labeled '1.3' points to the 'Baggage (kg)' field, which is currently set to 1.20. A red arrow labeled '1.4' points to the 'Confirm Edit' button.

1.5. If there is a need to remove the piece - select the necessary piece by clicking the **Baggage Tags** tab.

1.6. Press the **Delete** key.

1.7. Next, confirm the action-**Confirm Edit**, the selected luggage is removed.

1.8

1.9. If necessary to reprint all bag tags belonging to the passenger, select the passenger in the passenger list and right-click on the context menu, select - **Reprint bagtag(s)** or use the **Shift + F11** hot key, all bag tags will be reprinted.

A baggage tag is the only identification document confirming that a particular passenger has this baggage. The check-in agent is responsible for correct labeling of baggage (baggage tag).

Baggage check-in by Piece or Weight concept

Baggage check-in by Piece Concept + Single bag

If according to the rules of the airline there is a strict baggage check-in according to the “piece” concept, check the baggage information in the context menu. Right – click select from the context menu - **View Pax Data**- tab offers information on a selected passenger (1pc 23kg).

1.1. During the check-in of the selected passenger, the **-BAGGAGE tags** tab opens automatically.

In case of excess baggage limit, the system warns how much baggage weight is exceeded - "Baggage limit excess ..."

1.2. Next, a standard procedure for calculating and paying for excess baggage is carried out and printing a receipt for payment.

Weight Concept +Multi Bags

Within the following concept there is no limits on baggage pieces, the limitation is based on the total weight of checked - in baggage.

1.1. Select the passenger, right-click - context menu – “Check-in”.

1.1. In the table –Baggage (piece/weight/hand bag) – indicate the quantity and weight of baggage.

Example: 2pc/48kg

1.3. Confirm the actions by **Confirm Check-in** tab, next the tab “Baggage limit exceeded” is displayed - confirm the payment for excess baggage and print the receipt- then click **YES**.

Advanced Passenger Information (API)

According to the migration rules of most of countries, API is entered into the system. Often, the personal data of each passenger must be transferred in advance to the migration services of the country of arrival. There are three ways to form API:

- It comes from reservation systems (in PNL / ADL message);
- It can be entered during check-in via the OCR keyboard;
- during check-in manually.

API contains the following information:

Name, last name / date of birth / passport number / validity of the document / gender / citizenship / 3 letter code of the state that issued the document.

The screenshot displays a flight check-in system interface. At the top, flight details are shown: Flight 7J 4929 Tue Oct 20, 2015 - CHECK-IN 012C/198Y BOEING 757-200. The routing is LBD - OVB, Gate is ?, and the status is FO - Flight Open. The time is 13:35. Below this, a list of passengers is shown with columns for Name, Detail, Group, Dest, Class, Seq, Bags, PNR, Seat, and Status. A pop-up window titled 'Check in 1 passenger to check in' is open, showing the details for a passenger named ABDURAIMOVA PARVONA. The window includes fields for Name, TNR, Number of document, Expire of document, Name in document, Date of birth, and Country of citizenship. A red arrow points to the 'API' tab in the 'Check-in data' section. To the right of the passenger list, there is a 'Select view' dropdown and a 'Select algo' dropdown. Below these, there are two grids labeled 'C: Business' and 'Y: Economy' with columns A, B, C, D, E, F and rows 1 through 23. The 'Y: Economy' grid has a red arrow pointing to row 9, column A.

Upon request of the airport or migration services the system may send an APIS message to the airport of arrival or other authorized agencies of the destination country.

NOREC CHECK-IN

Reasons for passenger becomes NOREC:

- Passenger has OK ticket, but the reservation was canceled.
- The passenger has open/ request ticket or he has booked a ticket for another flight (GoShow).
- If the passenger bought a ticket before the flight, but did not get into the passenger list.

1. In order to check-in NOREC passenger, open the menu for entering this type of passenger using F3 key. Next, the passenger data entry form pops up (APIS information can also be entered upon request).

Passenger's offload - OFFLOAD

- If there is a need to offload the checked-in passenger from the flight:
 - Find the required passenger in the passenger list, right-click to open the context menu - **Offload passenger**

- 1.2. An Offloading pop-up window will appear on the screen, fill in a message about the reason of offload in the Comment tab, this message is required
- 1.3. Confirm action by Confirm offload

- 1.2. The offloaded passenger is highlighted in red in the passenger list.

STANDBY – check-in to the wait list

1. The STANDBY (Placing on a wait list) is used in the following cases:

- If the airline replaces the aircraft with a smaller configuration;
- If the passenger purchased a ticket with “Request” status (without a warrant for check-in);
- Other force majeure circumstances that require to put the passenger in STANDBY status.

1.1. Choose passengers from the passengers list (most likely this instruction will be given by the flight representative) required for placing passengers on the wait list. Right-click in the context menu, select the **Standby Passenger**, i.e. transfer the chosen passenger from the **OK** status to the **Standby**.

The screenshot shows the flight management system interface for flight 7J 4929 on Tuesday, October 27, 2015. The flight is a Boeing 737-300 operating on the LBD - OVB route. The status is 'F0 - Flight Open'. The interface displays a list of passengers with columns for Name, Detail, Group, Dest, Class, Seq, Bags, PNR, Seat, and Status. A context menu is open over the passenger list, showing options such as 'Check-in', 'Add group to selection', 'Block passenger', and 'Stand-By passenger'. The 'Stand-By passenger' option is highlighted, and a red arrow points to it with the label '1.1'. To the right of the passenger list, there is a 'Y: Economy' cabin layout diagram showing the seating arrangement.

1.2. Confirm the action - Yes

The screenshot shows the same flight management system interface as before, but with a confirmation dialog box open. The dialog box has a question mark icon and the text 'Really Stand-By passenger?'. It has two buttons: 'Yes' and 'No'. A red arrow points to the 'Yes' button with the label '1.2'. The background shows the same passenger list and cabin layout diagram.

1.3. The passenger data in the passenger list will be highlighted in blue.

Flight: 7J 4929 Tue Oct 27, 2015 - CHECK-IN 136Y BOEING 737-300

SSR-SPECIAL SERVICE REQUEST

Special Service Request (SSR) is a special code to indicate the information about individual passenger requests, for example: special food, transportation of non-standard baggage, animals, necessary devices for movement of disabled passengers, flight of underage without an adult and other requests, related to the special flight's conditions and / or convenience. SSR always require the airline to take a certain action - to confirm the requested service or deny it.

In DCS, SSR codes are generated in two ways:

- attached to the passenger's PNR coming along with the PNL / ADL when the ticket is issued, the check-in agent sends the airline a request for additional services. Further, the airline processes the request and responds with consent or refusal within 24 hours.

- entered manually by the check-in agent upon passenger's request and the mandatory confirmation of the airline representative and other involved in this process services

1. To view the passenger's SSR code obtained from PNL / ADL, select the passenger, open context menu "View Pax Data", the tab with the passenger's SSR codes will appear:

BOARDING

1. Open the module – **Flights** tab

2. Select a flight where the boarding starts.

3. Open the module – Boarding tab

4. Apply boarding passes to the BGR (Boarding Gate Reader) - the system provides the response - Boarded

5. There is a possibility of manual passenger's boarding if the BGR is not working properly or there is no connection with it.

Deboarding

1. In order to deboard the required passenger from boarding:
 - 1.1. Choose a passenger, right-click to open the context menu, select **Deboarding**

- 1.2 There is a pop-up window, **Gate Comment** where should be a comment with the reason for deboarding the passenger
- 1.3. Confirm the action "**Confirm Deboard**"

1.4. The passenger gets **Checked-in** status

Documents (Main Final Reports)

1. At the end of the boarding, the agent has to print all the documents required by the airline. The printing of final documents are possible in two ways:

1. Through tabs:

- List
- Tr.List
- Comments
- Pax
- Bag
- Tr.Manifest
- NNOS
- INFT/CHLD
- ZONES
- ETKT
- HISTORY
- OTHERS

1. Or through the pop-up

Available documents:

- List Manifest
- Transit List
- Comments List
- Passenger Manifest
- Baggage Manifest
- Transit Manifest
- No show / No rec (NNOS) Manifest
- Infant and Child Manifest
- Zones Report

- E-ticket List
- History Manifest
- Excess Baggage Manifest

1.2. Open the “ List Manifest” tab with the report documents: “Passenger Manifest”, “Baggage Manifest”, “Transit Manifest” and etc.

1.3. Print each document upon request - **Print**

Paragraph 2

Manual of System Administrator

Adding new airlines - AIRLINE

1. Adding new airlines

To add a new airline, go to the **Settings> Airlines**

The list of airlines will appear on the screen. Press **Insert** to add an airline. The screen displays the airline data entry window. Entering the necessary data and save the filled columns with **Save** key.

2. List of airlines

The entered data of the new airline is shown in the list of airlines.

3. Enter the type of aircraft.

- 3.1. Key (+ / -) – press the button and open the window to enter data of seats positioning
- 3.2. window for adding seat configuration
- 3.3. button + opens the window for adding the type of aircraft
- 3.4. window for adding type of aircraft

- 3.5. "Save" – to save data of the aircraft type
- 3.6. button + select standard aircraft code
- 3.7. window for adding standard IATA aircraft code
- 3.8. "Save" – to save data on the standard IATA code of the aircraft
- 3.9. "Save" - to save all entered parameters

To enter data of the aircraft type select "Configuration". Click + **(3.1.)** to open the window for entering the quantity of aircraft seats (3.2.). Click + **(3.3.)** to open the window for entering an aircraft type data (3.4.). When type of aircraft is entered save data with **"Save"** button (3.5). Press + **(3.6.)** to open the window for entering IATA code. After the data is entered in 3.7. save it, press **"Save"** (3.8.). Press **"Save"** **(3.9.)** and save all data about type and standard IATA code of the aircraft.

4. Aircraft seat configuration

- 4.1. Button «S» - SEATMAP
- 4.2. Button «New» - adding a seat configuration card
- 4.3. Window for entering the Type of Configuration
- 4.4. selection the type of aircraft
- 4.5.1. the row numbering (some airlines avoid number13)
- 4.5.2. free (service) compartment (e.g. kitchen)
- 4.6. letters, empty seats and emergency exits
- 4.7. Type of Business Class
- 4.7.1. – window to select the type of Business class
- 4.7.2. - to create seats in the selected type of business class
- 4.7.3. – letter designation of the seats in business class
- 4.8 - to enter the data about the type of economy class
- 4.8.1. – to select the type of economy class
- 4.8.2. – to create rows of seats in the selected type of economy class
- 4.8.3. – letter designation of the seats in economy class
- 4.9. - Zones creation in the cabin
- 4.9.1. – 4.9.7. – Distribution of passengers in the cabin zones.
- 4.10. – **"Save"** - to save all entered seat configuration data.

To add seat configuration create a seat map using a graphical editor. Press **S** (4.1.) will open the window for adding a new configuration (4.2.). Press **"New"** will open the window for entering data about the type of configuration (4.3.), type of aircraft (4.4.), data of correcting the seats numbering, free (service) compartments (4.5.1 and 4.5.2.), data on the quantity and location of seats by service class and zone (4.6.-4.9).

Press **"Save"** to save the map.

4.11. Classification of subclasses

Classification of subclasses in a particular class type is shown in the **ClassMapping** tab.

4.11.1. IATA code

4.11.2 ClassMapping tab

4.11.3. Subclass selection

4.11.4. "Save Mapping Changes"

Enter the airline's IATA code in 4.11.1 and the list of subclasses will appear in the ClassMapping tab (4.11.2.). Select the type of subclass (4.11.3.) and enter the type of class (in this case, business class). Save new data with "Save Mapping Changes".

Adding a new airport - AIRPORT

1. Adding a new airport

To add a new airport, go to **Settings>Airports** tab

The window to enter the airport data will appear. Click **"Save"** to save the data of the newly opened airport.

Creating a new user - USERS

1. Creating a new user

To create a new user go to the **Settings/Users** tab

The window to enter the data about new user will appear:

1.1 "New" - adding a new user

1.2 Window to add user data (user, encrypted code, full name and password)

1.3. Activation of new user

1.4. Permission to a new user to work with airlines

1.5 "Save" button - saves the entered data about the new user.

1.6 Window of confirmation the completion of registration of the new user in the system

Click "New" to create a new user (1.1.), then a window for entering data about the new user will appear.

In 1.2. enter the individual data about the new user including - user, encrypted code, last name and username, password and password confirmation.

The activation and permission to work with airlines needs to be marked.(1.3. and 1.4.).

Click "Save" (1.5.) to save the data about the new user.

Now the new user is shown in the list of users (1.6.), which means that his registration is completed.

User rights

1.7. "Permissions"

1.8. Window of user rights

To view and select the user rights use the "Permissions" tab, where the user rights are displayed (1.8.)

1.9. «Assigned Roles» tab

1.10. Option to prohibit the airline use

1.11. boarding permission

1.12. check-in permission

1.13. permission of the flight opening (FO), check-in (CI), boarding (G) and flight closure (PD).

The "Assigned Roles" tab is used to define user rights. (1.9.) The screen shows user rights options, including a ban on the use of a particular airline (1.10.), permissions to board passengers (1.11.), permissions to check-in passengers (1.12.), permissions to open a flight, check-in, boarding and closing a flight (1.13.).

The system administrator may exceptionally give the user permission to some rights, for example, the right to exceed the baggage limit.

"User Permissions" tab (1.14.) to choose any of rights. Open this tab to select an option. (in this case, the right to exceed the baggage limit 1.15.)

Hierarchy of rights (1.16.)

There are four roles in the system: airline administrator, supervisor, check-in agent and boarding agent. Each role has its own rights. For example, the administrator is given the authority indicated on page 2. 7-9 Instructions. The administrator can be assigned to one or more airlines.

- The supervisor performs the same functions as the administrator and has the authority for check-in and boarding.
- The check-in agent performs passenger check-in (p.10 of the Instruction)
- The boarding agent is responsible for the boarding (page 52 of the Instructions).
- Additional roles can be added with certain rights at the customer's request.

Rights and authorities of the process participants (1.17.)

Setting messages - Messages

1. To create SITA mail server and send post flight messages, go to the **Settings/Messages** tab.

1.1. "New"

1.2 Window to enter data about the mail server

1.2.1. "Double Signature Sita" - usage of double signature for messages via SITA channels

1.2.2. Letter logging option

1.3. Save the entered data

1.4. The window to enter the data of the new SITA mail server.

Click **"New"** (1.1.) to open a window to enter the SITA mail server data, in particular: the host name, user and the password (1.2.).

Select 1.2.1 - **Use Double Signature** - this function means that the cost of messages is paid by the recipient and 1.2.2, which means that the message will be archived.

Click **"Save"** (1.3.) to save the entered data.

As a result, the new SITA mail server will appear in the list of mail servers (1.4.).

1. To create a regular mail server and send post flight messages, go to the **Settings/Messages** tab.

1.5. "New"

1.6. Window to enter data of the mail server

1.6.1. Letter logging option

1.7. Save the entered data

1.8. Window to output data about the new mail server .

Click **"New"** (1.5.) to create a window for entering data of a regular mail server, which should have the following information: the host name, user and password (1.6.).

Choose option (1.6.1.) to log (archive) any entered messages.

Click **"Save"** (1.7.) to save the entered information, as a result, the new regular mail server will appear in the list of mail servers (1.8.).

2. Setting the types of messages

2.1. «Post flight Messages» tab

2.2 Window to enter the airline IATA code

2.3 To enter the airport of departure

- 2.4. To enter the airport of arrival
- 2.5 Window to select messages
- 2.6. "New" button.
- 2.7. To select mail service
- 2.7.1. - option to limit the number of lines in the message
- 2.7.2. – Window to enter recipient data
- 2.7.3. - Window to enter data of recipients who receives a copy of the message
- 2.7.4. - To enter data of recipients who receives a hidden copy
- 2.8. - **"Save"** button

To create a message enter the "Post Flight Messages" tab and the window to enter data about the IATA code (2.2.), Airport Information (2.3.) and Arrival Information (2.4.) will be opened.

The screenshot shows the 'Post flight messages' window. The 'Servers' tab is active, displaying a list of message types on the left and a 'Messages Types list' on the right. The 'Messages Types list' is currently empty. The 'Post flight messages' tab is highlighted with a red box and labeled 2.1. The 'Messages Types list' is labeled 2.2. The 'Post flight messages' tab is labeled 2.3. The 'Messages Types list' is labeled 2.4.

Enter specified data and the tab will show the message type (2.5.), the window to enter the following data: type of mail service (2.7.), the option to limit the number of lines in the message (2.7.1.), the choice of the recipient's address. Since "Zamar" is a user of the "m.connect" service, it is necessary to display symbols in this window using the specified service.

The data about recipients in the open and hidden copy should be entered in the window 2.7.3. and 2.7.4. Press "Save" to save all the new data.

2.9. Window to select messages

2.10. "New" button

2.11. - to select mail service

2.11.1. - option to limit the number of lines in the message

2.11.2 - Select recipient address

2.11.3. - Enter data of recipients included in the open copy

2.11.4. - Enter data of recipients included in the hidden copy.

2.1.2 - "Save" button

Enter the specified data and the tab will show the type of message (2.9.), window to enter the following data: the window of mail service selection (2.11.), the option to limit the number of lines in the message (2.11.1.), the selection of recipient's address (2.11.2.).

The data about recipients in the open and hidden copy should be entered in the window 2.11.3. and 2.11.4. Press "Save" to save all the new data (2.12).

Setting baggage limit- Class mapping

1. Set the baggage limit

To create baggage limit settings, use **Settings / Classmapping and Baggage Limits** tab.

1. the window to enter the airline IATA code
2. luggage limit tab
4. - window to data about the place and baggage limit in the first class
5. - limit in business class
6. - limit in economy class
7. - option to select the limit of baggage in accordance with the subclasses
8. – window to enter data in subclasses
9. - “**Save Rules**” button

The window to enter IATA code(1.) activates in the Settings/Classmapping and Baggage Limits tab and the baggage limit tab (2). Select the option of choosing the baggage limit according to the class of service (3), the window of choosing the seat, baggage limit and hand luggage according to the class of service (4-6) and subclasses (7-8) will appear.

“**Save Rules**” button to saves the entered data.

This example shows how to set up baggage for all flights of U6 airline.

Below is detailed description of the baggage limit settings for a specific flight of the specified airline.

10. – IATA- code of the airline
11. – Flight number
12. - option to select the baggage limit in accordance with the class of service
13. - a window to enter data about the place and baggage limit in the first class
14. - limit in business class
15. - limit in economy class
16. - option to select the limit of baggage in accordance with the subclasses
17. – window to data in subclasses
18. - “**Save Rules**” button

The **Settings/Classmapping and Baggage Limits** tab activates the window to enter data about the airline's IATA code (10.), the number of a particular flight (11), and the baggage limit tab (12). Select the option of setting the baggage limit according to the class of service (13) and the window of choosing the baggage limit and hand luggage according to the class of service (14-16) and subclasses (17-18) will be activated.

Press the button “Save Rules Changes”.

The Baggage Tariffs tab is used to display check-in and payment settings for excess baggage

20. BaggageTariffs

21. Window to select the currency.

22. option to choose the payment for excess baggage according to the class of service

23. the window to enter data on payment for excess baggage in the first class

24. in business class

25. in economy class

26. - option to choose the payment of excess baggage according to the subclasses

27. - window to enter data in subclasses

28. – «SaveTarif Changes»

Save Tarif Changes 28

The BaggageTarifs tab shows the window of currency selection for paying for excess baggage. Elect the option of the payment for excess baggage in accordance with the class of service (22), the window to enter the data in accordance with the class of service (23-25) and subclasses (26-27) will appear.

"Save Tarif Changes" button (28) to save entered data.

Hotkey combination/Reload/ Data Update

Hotkey combination

Reload

An error occurs if DCS clients lose contact with the DCS server.

Click "OK" and then "RELOAD" to restore the session and data with the possibility to continue working.

If DCS clients and DCS server suffer from long term communication loss, the system requires relogging.

Data update

If the check-in agent did not work with the system for a certain period of time (more than a minute), it is necessary to make the data updates manually and press "RELOAD" before starting the work.

Terms and Definitions

Passenger	Anyone aboard the aircraft, except the crew
Adult	An adult passenger who is 12 years old and therefore pays 100% of the applicable fare.
Child	A passenger aged 2-12 years who usually pays 67% of the applicable fare.
Infant	A passenger under 2 years old will pay 10% of the applicable fare. Babies do not have a seat on board, so they must fly in the parents hands or in the basket.
Noshow passenger	A passenger who didn't show up for a flight
Check-in	Check-in
Checked-in	The person who has finished the check-in procedure
Flight number	The number of flight
Date of flight	Date of flight
Flight status	Flight status
FlightEdit	The flight is in editing mode
Flight Open	Flight open for check-in
FlightClosed	Passenger check-in is closed and boarding is in progress
Flight Hold	Flight on hold, in this status - check-in is not possible
Flight-PD-Purged data set	The flight's gone and check-in is not possible.
Destination	Destination of the flight

Paragraph 3

User Manual – for aircraft centering specialist

WEIGHT & BALANCE

When flight status is «FC» -flight closed », then open “WB” tab for the preparation and filling out the Consolidated -load sheet.

Loading Instruction Report Form
norwegian 737

Load with cockpit crew to avoid fire issues and maximum weights exceeded

The following criteria shall be used for loading Norwegian 737 aircraft:
• Distribute load with 70% A/T and 30% FWD.
• If total load is 500 kg or less, all load can be loaded A/T.
This apply as a general rule unless otherwise stated by the Commander.
Load FWD hold first - Offload A/T hold last.

Accompanied Baggage

Unaccompanied Baggage

Crew Hold Baggage

Automated Manual

☐☐

☐☐

☐☐

I am satisfied that to the best of my knowledge:

1. All hold baggage loaded onto the aircraft is accounted for.

2. All hold baggage loaded onto the aircraft is appropriate to the flight.

3. All checked in passengers have boarded the aircraft (or where not, the associated baggage removed).

4. Where unaccompanied hold baggage is being carried, it has been clearly identified as such on the manifest.
